& ENVIRONMENTAL SCIENCES

# Objectives

---

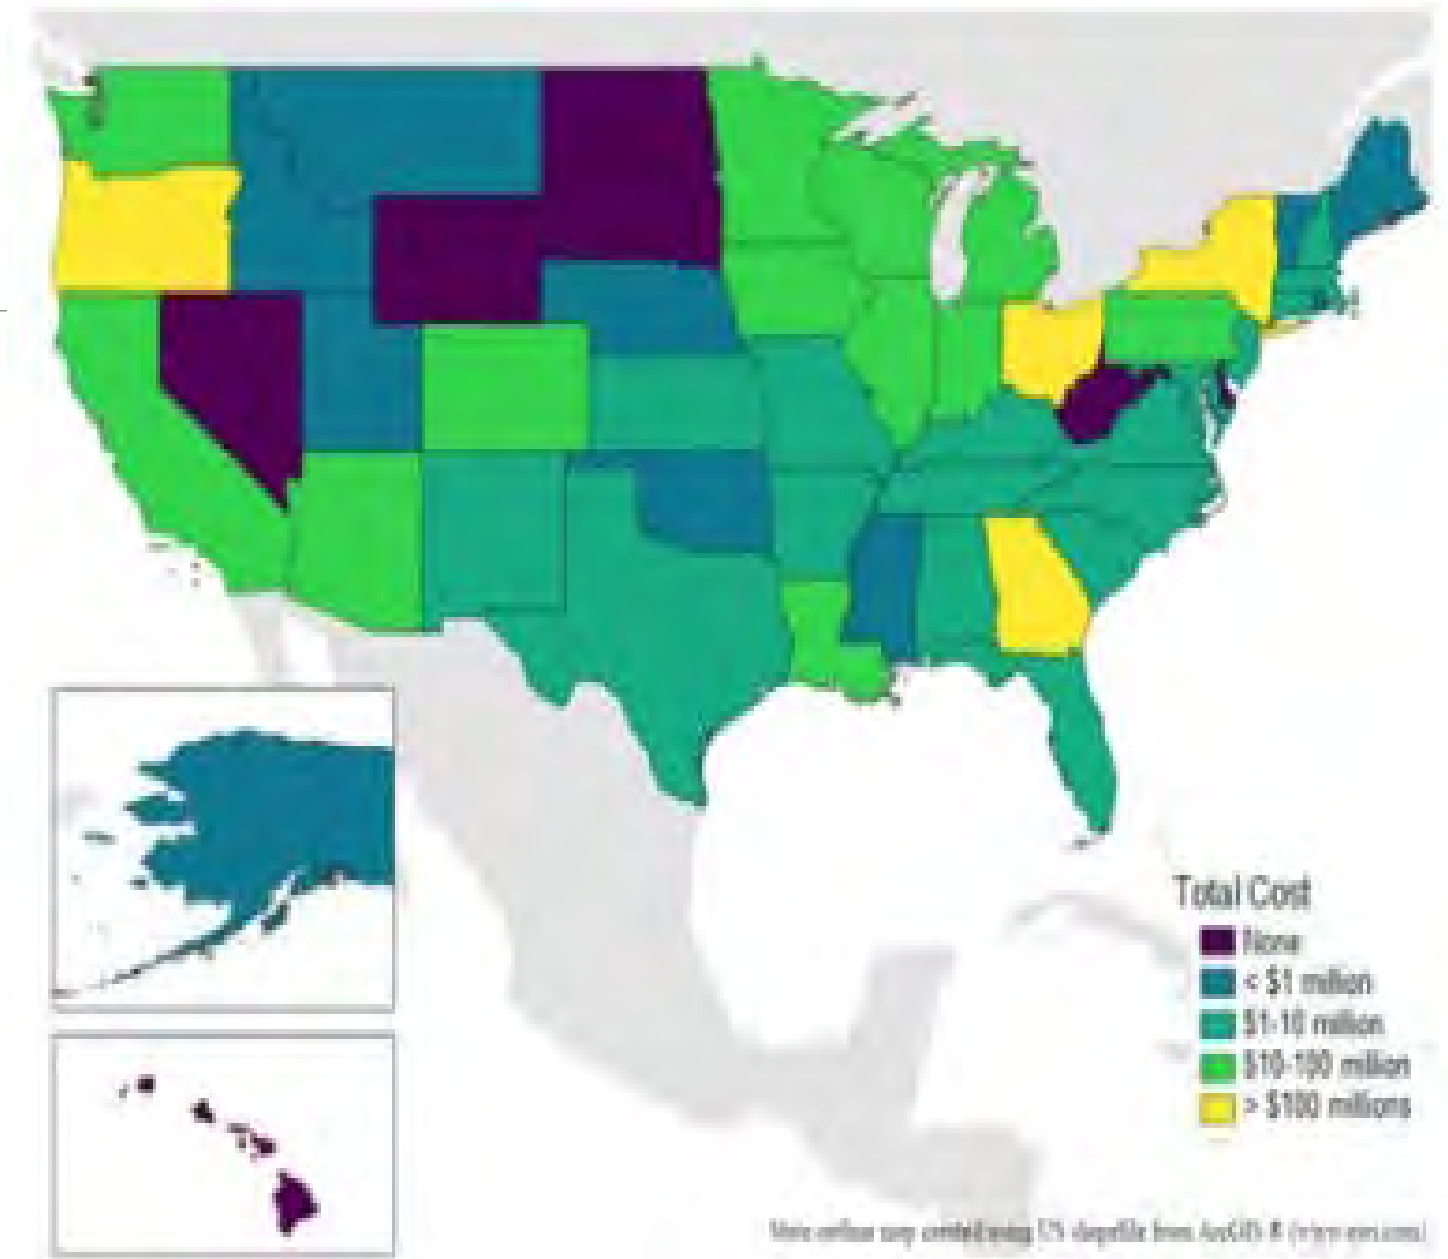

- Overview of green infrastructure around the country
- Economic impacts of green infrastructure
- Equity considerations
- Finding funding for green infrastructure

# Dollars spent

Practices used:

- 55% bioswales
- 50% rain gardens
- 45% bioretention ponds
- 44% porous pavement

Most projects used an average of three practices.

# Why?

---

- 1972 Water Quality Act: regulates discharge of pollutants into water
- National Pollutant Discharge Elimination System: Requires cities, towns, and counties over 50,000 to obtain state permits to discharge into waters
- Municipal Separate Storm Sewer System Permits/Combined Sewer Overflow Permits: Many states incorporate GSI guidelines
- **Sustainability goals (community level)**
- **Increasing severe storm events**

# Economic valuation

- Reduction in stormwater runoff
  - Reduced water treatment needs
  - Reduced grey infrastructure needs
  - Improved water quality
  - Reduced flooding
- Reduction in energy used
  - Cooling buildings
  - Reducing energy needs for water treatment
- Air quality improvements
  - Reduced nitrogen dioxide (NO<sub>2</sub>), ozone (O<sub>3</sub>), sulfur dioxide (SO<sub>2</sub>) and some particulate matter
  - Related health benefits
  - Indirect energy reduction

Annual Rainfall Interception in Gallons from 1 tree, 40-year average, Midwest Region

	<b>Small tree: Crabapple</b> (22 ft tall, 21 ft spread)	<b>Medium tree: Red Oak</b> (40 ft tall, 27 ft spread)	<b>Large tree: Hackberry</b> (47 ft tall, 37 ft spread)
<b>Rainfall Interception</b>	292 gallons	1,129 gallons	2,162 gallons

Source: McPherson, E. et al. (2006).

- **NO<sub>2</sub> = \$3.34/lb**
- **O<sub>3</sub> = \$3.34/lb**

- **SO<sub>2</sub> = \$2.06/lb**
- **PM-10 = \$2.84/lb**

US Forest Service

# Calculating economic benefits

Hypothetical green roof program

Benefit	Annual Benefit (\$) per 5,000 SF green roof (Example Demonstration 1)	Annual Benefit (\$) from scaled green roof program (= annual benefit per roof * 240 converted roofs)
<b>Reduces Stormwater Runoff</b>	\$6.53	$\$6.53 * 240 = \$1,567.20$
<b>Reduces Energy Use</b>	$\$107.60 + \$444.75 = \$552.35$	$\$552.35 * 240 = \$132,564.00$
<b>Improves Air Quality</b>  <i>Note: The figures used here only account for the benefits of reduced NO<sub>2</sub>. Similar steps should be performed for the other criteria pollutants, when possible.</i>	\$100.83	$\$100.83 * 240 = \$24,199.20$
<b>Reduces Atmospheric CO<sub>2</sub></b>	\$49.04	$\$49.04 * 240 = \$11,769.60$
<b>Total Annual Benefit (Σ Annual Benefits)</b>	<b>\$708.75</b>	<b><math>\\$708.75 * 240 = \\$170,100.00</math></b>

# Tax Revenue

---

- Well designed landscaping boost rental rates by 7%.
- Retail customers are willing to pay 8-12% more when shopping in a place with a mature tree canopy.
- Proximity to green infrastructure increases property value ~2-26.6%.
- Flood mitigation increases property value by 2-8%.

## The Value of Green Infrastructure

A Guide to Recognizing Its Economic, Environmental and Social Benefits

**A Guide to Assessing  
Green Infrastructure  
Costs and Benefits for  
Flood Reduction**

## CLASIC Vision

*The CLASIC tool is a user-informed screening tool which utilizes a lifecycle cost framework to support stormwater infrastructure decisions on extent and combinations of green, hybrid green-gray and gray infrastructure practices.*

**CENTER FOR THE ECONOMICS OF SUSTAINABILITY**

# Equity and Social Justice

- Atlanta's Beltline project
  - Will connect 45 Atlanta neighborhoods
  - Will convert a 22-mile rail road track with of trails, parks, and eventually a streetcar.
  - Property value increase of between 17.9% and 26.6% within a ½ mile of the beltway.
  - Disproportionally affected minority and low income neighborhoods, despite efforts to maintain affordable housing.
  - (Immergluck 2018)
- General Guidelines
  - Function and location matter
    - Transportation corridors
    - Proximity to downtown or business districts
  - Park size seems less connected to increases in prices.
  - (Rigolon, 2019)

<https://beltline.org/about/the-atlanta-beltline-project/atlanta-beltline-overview/>

# Funding Overview

---

- 80% of projects used only one funding source
- 66% used grant sources
- 51% used only grants

## Green Infrastructure Funding

(Zimmerman, 2019)

# How do you pay for it?

## SIMPLE

Charitable gifts, members,  
& grants  
Planned giving  
Corporate giving  
Donated easements  
Bargain sales  
Seller financing  
Public funding  
Transfer fees  
Conservation buyer

## MODERATE

Fee-for-service  
Business partnerships  
(i.e., voluntary surcharge)  
Bridge financing or loans  
Ballot measures  
Conservation  
development

## DIFFICULT

Investment funds  
New Market Tax Credits  
Environmental markets  
Water-utility payments  
Natural-resource-damage  
payments

Framework adapted from Brad Gentry & Story Clark

# Impact Bonds

## Atlanta Environmental Impact Bond Breaks Into Public Market

- Return depends on results of the project.
  - 3.55% return
  - After 6 years, if returning 6.52M gallons of stormwater capacity, investors get a performance pay out.
- First public sector impact bond
  - Established with grant funds from the Rockefeller Foundation

<https://www.conservationfinancenetwork.org/2019/06/24/atlanta-environmental-impact-bond-breaks-into-public-market>

# Impact Investing

---

“Impact investments are investments made with the intention to generate positive, measurable social and environmental impact alongside a financial return,” according to [Global Impact Investing Network \(GLIIN\)](#).

- Market is growing at 18%/year
- \$12.0 trillion or more of professionally managed investments is currently invested in socially responsible investment strategies.
- What does it mean for communities?
  - Community Development Financial Institutions seek community projects.
  - Community foundations leverage donations to support socially responsible.

# Ag-Urban Partnerships/Water Quality Permit Trading

---

\$ for ag practices that improve water quality upstream

Improved water quality/pollutant load relief at treatment plant downstream

# Stormwater Utility Fees

- 1639 programs 40 states and DC
  - 6 states have over 100
- Smallest community: Creek Village, FL (pop 88)
- Average fee: \$5.18/single family household
  - Fees range from \$0-\$69.25/month
  - Most set fees based on impervious area

<https://www.wku.edu/seas/documents/swusurvey2017b.pdf>

# Illinois Stormwater Utilities

## Legend

### Illinois Stormwater Utilities

- Arlington Heights
- Aurora
- Bloomington
- Buffalo Grove
- Champaign
- Decatur
- Downers Grove
- East Moline
- Eureka
- Freeport
- Highland Park
- Hoffman Estates
- Matteson
- Moline
- Morton
- Normal
- Northbrook
- Palatine
- Park Ridge
- Rantoul
- Richton Park
- Rock Island
- Rolling Meadows
- Tinley Park
- Urbana
